

MOTOR MOUNTING KITS

EASY INSTALLATION ACCESSORIES

Tamco Motor Mounting Kits have been carefully configured based on the most common motor mounting arrangements to ensure they include all the necessary components and accessories for a smooth and efficient installation. Each kit provides all that is needed to save time and simplify installation processes.

ADVANTAGES

- Eliminate the guesswork when mounting motors to Tamco dampers.
- Reduce errors caused by installation improvisation.
- Speed up installation with kits specifically designed for the selected damper configurations.
- Crafted and assembled from the same high-quality materials as Tamco dampers, ensuring consistent quality.
- Designed to provide the same reliable performance as Tamco dampers ensuring optimized performance.
- Actuator mounting accessories are covered under the standard Tamco warranty (actuators excluded).
- Kits will be available in a versatile range of damper setups and configurations.

KIT CONFIGURATIONS

- Internal jackshaft: where the actuator motor is installed in the air stream parallel to the frame of the damper.
- Internal Jackshaft 90°: Actuator motor is installed in the air stream perpendicular to the frame of the damper.
- External Jackshaft: Actuator motor is installed outside of the air stream parallel to the frame of the damper.
- External Direct Mount 90°: Actuator motor is installed directly to the drive rod (outside of air stream) and is perpendicular to the damper frame.
- External Direct Mount: Actuator motor is installed directly to the drive rod (outside of air stream) and is parallel to the damper frame.
